

Atul Murali

• Web Developer • atul.murali@outlook.com • (408) 857-8548 • Santa Clara, CA • [LinkedIn](#) • [Github](#)

Web Developer with 5 years of experience in frontend development and 3 years of backend experience. Experienced at building user-friendly web apps with React, Vue, Typescript, Golang, and SQL. Skilled at leveraging AI tools like Claude Code to accelerate feature development across the full stack.

Professional Experience

Software Engineer Volunteer (Remote)

September 2024 – Present

Vivid Kids Foundation – Costa Mesa, CA

- Used React, Redux, and Typescript to develop an educational testing app that lets child specialists conduct assessments for special needs children. Added dual-monitor functionality to the app
 - Led end-to-end development of report feature allowing specialists to generate comprehensive reports and graphs on a child's performance, using pdfmake to convert the full report to PDF format
 - Implemented video recording of the child across multiple webcam streams. Also implemented audio recording and webcam snapshots for each task in an assessment
 - Seamlessly integrated the React frontend with the Golang and PostgreSQL backend. Updated multiple Golang services and helped migrate database library from SQLX to GORM
 - Migrated the app to the latest versions of React and MUI. Also migrated the build tool from React-Scripts to Vite, cutting build time from 2 minutes to roughly 5 seconds
-

Contract UI Developer (Remote)

February 2024 – August 2024

Smart Connections Consulting, LLC – Austin, TX

- Used Vue and Bootstrap to develop a proof-of-concept website for tracking and managing chemical industry compliance records, featuring chemical declaration forms for companies and countries
 - Implemented searchable AgGrid tables containing chemical import/export records, allowing national authorities to approve declarations or report any discrepancies to world authorities
 - Collaborated with backend developers to integrate the frontend with the Java and Postgres backend
-

Frontend Developer (Remote)

July 2022 – April 2023

Rocket Communications, Inc – San Francisco, CA

- Used React to build 2 interactive web apps simulating satellite management workflows
 - Used React, Typescript, and Redux to rewrite a defense contractor's Vue app, working in a team of 5
 - Overhauled CSS and SCSS styles to match the latest Figma designs crafted by the UX design team
-

Software Engineer Intern (Remote)

May 2020 – December 2022

NeuroLeap, Corp – San Jose, CA

- Built an educational testing app with React.js, Redux, and Typescript that allows child specialists to test children on a wide range of cognitive, language, and motor skills, collaborating with 10 interns
- Used VueJS and Bootstrap to develop an administrative dashboard that allows child education specialists to create/deploy custom exams to assess and improve child performance
- Built an informational website for parents of special needs children using Vue.js, Vuex, and CSS

- Updated Golang REST APIs and Postgres schemas, with a focus on the authentication functionalities (login, registration, password recovery). Integrated backend changes with the React/Vue frontends
- Wrote technical onboarding documentation to resolve common setup issues for new interns, reducing onboarding time. Also assisted interns with coding tasks and helped setup their machines

College & Personal projects

- Used React, Typescript, Node, and MongoDB to build an app that displays random Wikipedia articles for user-selected countries (selected by clicking on a world map). App allows users to save Wikipedia summaries as notes or add their own custom country notes. Used Claude for development and Sudocode AI for project scoping
- Worked in an Agile team of 10 to develop Grocer-E, a mini grocery-shopping website. Built the frontend with React, Bootstrap, and CSS, and integrated it with the Firebase backend
- Developed a Python script that generates a spreadsheet listing all PDFs in the current folder (and subfolders), along with the corresponding page counts of each PDF
- Wrote a Python script to generate customizable note-taking templates for PDF books, allowing users to adjust granularity of the templates (1 heading per book page, or 1 heading for a set of “n” pages)

Key Skills & Abilities

Programming languages: JavaScript, Typescript, HTML5, CSS3, Golang, Python, Java

Libraries & Frameworks: React, Vue, Redux, Bootstrap, MUI, AgGrid, pdfmake, Tanstack Query

Databases & Tools: PostgreSQL, MySQL, Git, Linux Command Line, Claude

Education & Certifications

B.S. Software Engineering (2017-2021) – San Jose State University, San Jose, CA

Certifications: Google Cloud Professional Machine Learning Engineer
